Brian LeDuc, Program Director

## October 25–29, 2004

### Electronic Citations

Working with a steering committee consisting of representatives of AOC, DOL, DOT, LESA and WSP, I have put together a statement of work for automating the exchange of citations data after collection by state or local law enforcement. I will present this plan to the Board for endorsement at the November meeting. I am hoping to use the \$200,000 I was awarded as part of the state's homeland security strategy to finance this effort.

The AOC has recently awarded a contract to Codesic Consulting for E-citations pre-planning efforts, and I will meet with the project team on Monday. We discussed this effort initially at the E-TRIP meeting on Thursday, and I believe that there is a real opportunity for the limited work that Codesic is under contract for (two weeks of work) to lay the foundation for future JIN efforts in this area.

### Byrne Grant RFP

We are expecting OFM approval of the proposed contract with Online Business Systems early next week. I am scheduled to meet with the Project Manager from Online on Monday.

### Summary Offender Profile (SOP)

Templar again missed their promise to provide me this week with the promised proposal in response to my request to implement the changes requested by LESA employees, and to provide information that will help Online interface with Templar's proprietary technology. I will report back next week. Not the kind of behavior that inspires confidence.

I am still seeking an audience for SOP. I arranged this week to present the application to DOC field operators next month in Tacoma. I also discussed this with Martin Kravik of the Attorney General's office, who circulated information to potential users there.

### Miscellaneous

I have put together a draft agenda for the November meeting, which I have discussed with Mike McVicker and sent to Steve Clem for comment. In addition to a report on the progress of the JIN Decision package from Garry Austin of OFM, we will discuss the future of summary offender profile, the project plan and schedule for the JIN Criminal History Query (CHQ) and the E-Citations Proposal.

#### Effective Strategies in Justice Information Integration

In this study, the Center for Technology in Government (CTG) examines the factors that influenced the success of selected justice information integration initiatives. Information integration presents many challenges, such as turf and resistance to change, information technology (IT) and data incompatibility, organizational diversity and multiple goals, and environmental and institutional complexity. CTG's study illustrates the strategies and success factors used to mitigate these barriers.
